CLUE ONE BANG THREE

Rules of Scrabble:

Each player has a rack of seven tiles. On your turn, you play some (or all) of the tiles from your rack, all part of the same word; you may form other words in the process, but every vertical or horizontal line of contiguous tiles must be a valid English word. The tiles you play must be connected to the tiles already on the board. At the end of your turn, you draw back up to seven tiles. Your score on a given turn is the sum of the point values of the words you create, each of which is the sum of the point values of their constituent tiles (including tiles which were already on the board). The tiles have the following values, which correspond to their rarity:

1: AEILNORSTU
2: DG
3: BCMP
4: FHVWY
5: K
8: JX
10: QZ

For the purposes of this puzzle, assume there are no premium squares or 50-point bonus for playing all of your tiles.
